

RISKO

Senior DevOps Engineer | DevSecOps Enthusiast | Infrastructure Automation | Cloud & CI/CD Security

Pamulang, Tangerang Selatan | +62 813 1688 8438 | risko.alexander@gmail.com

Linkedin : <https://www.linkedin.com/in/risko-237416106>

Website: <https://risko.my.id/>

PROFESSIONAL SUMMARY

Senior DevOps Engineer with 8+ years of experience in infrastructure automation, CI/CD engineering, cloud operations, Linux administration, and security-focused automation. Experienced in reviewing and improving Jenkins pipelines, Ansible playbooks, VMware automation workflows, Kubernetes deployments, monitoring platforms, and cloud infrastructure across GCP and Alibaba Cloud. Strong interest in DevSecOps, vulnerability assessment automation, infrastructure hardening, AI-driven security analysis, and secure deployment practices. Currently pursuing a Master's Degree in Informatics Engineering with academic exposure to cybersecurity, data protection, and artificial intelligence.

CORE COMPETENCIES

Infrastructure Automation & Provisioning	CI/CD Architecture, Release Automation & Deployment
DevSecOps Integration, Security Hardening & Vulnerability Assessment	VMware and Ansible Automation Review
Kubernetes, Container Platform & GitOps-based Deployment	Cloud Operations on GCP and Alibaba Cloud
Monitoring, Observability and Incident Troubleshooting	Python, Bash and Groovy Automation Scripting
Technical Review, Mentoring and Cross-Team Collaboration	AI-driven Security Analysis and Secure Automation

TECHNICAL SKILLS

Area	Tools / Technologies
Cloud & Virtualization	Google Cloud Platform, Alibaba Cloud, VMware
Container & Orchestration	Kubernetes, GKE, Docker, Helm, ArgoCD
CI/CD & Automation	Jenkins, GitLab CI, Bitbucket, Ansible, Terraform
DevSecOps, Security & Code Quality	WAF, Cloud Armor, HashiCorp Vault, Vulnerability Scanning, Infrastructure Hardening, Ruff, Trivy , semgrep and Sonarqube
Monitoring & Observability	Prometheus, Grafana, Google Cloud Monitoring
Programming & Scripting	Python, Bash, Groovy, Go, REST API
Database & Middleware	PostgreSQL, MySQL, Redis, RabbitMQ, NSQ
Web & Infrastructure	NGINX, Apache, Linux Server Administration

PROFESSIONAL EXPERIENCE

PT. Bank Danamon Indonesia Tbk

Senior DevOps Engineer | Dec 2023 – Present

- Provide technical leadership and best-practice recommendations for infrastructure provisioning automation, network automation, and operational reliability improvement.
- Review Jenkins jobs, Groovy scripts, Python scripts, Bash scripts, and Ansible playbooks before production execution to reduce automation failure risk.
- Collaborate with infrastructure and hardening teams to design automation initiatives for server hardening.
- Analyze VMware and Ansible integration workflows, including playbook risk assessment, execution flow validation, and infrastructure impact review.
- Validate automation tasks after code changes to ensure reliability, consistency, and production readiness.
- Improve automation code readability, maintainability, logging, error handling, and operational safety through structured technical review.

- Designed and developed Python-based internal tools to automate manual operational support activities, improve process consistency, reduce repetitive workloads, and enhance operational efficiency across infrastructure workflows.

Key Focus: Infrastructure & Network automation, VMware automation, Jenkins pipeline review, Ansible playbook validation, hardening automation.

PT. Jaya Agung Teknologi

Senior DevOps Engineer | Feb 2022 - Dec 2023

- Led the design and implementation of CI/CD delivery workflows using Jenkins and ArgoCD to support reliable, repeatable, and automated application deployment across cloud and Kubernetes environments.
- Designed, provisioned, and maintained Google Cloud Platform infrastructure to support production workloads, application scalability, monitoring, and operational continuity.
- Implemented end-to-end observability using Prometheus, Grafana, and Google Cloud Monitoring to improve service visibility, infrastructure health monitoring, and incident response capability.
- Planned and executed Kubernetes workload migration across clusters and regions with a focus on service availability, deployment consistency, and minimal business disruption.
- Performed cloud resource analysis and cost optimization by reviewing infrastructure utilization, monitoring tool usage, and cloud service consumption.
- Strengthened production security posture by reducing public exposure and implementing access protection mechanisms using Cloudflare and related security controls.
- Collaborated with development teams to define deployment strategies, release planning, infrastructure requirements, and sprint-based delivery support.
- Mentored junior engineers in CI/CD practices, cloud infrastructure operations, Kubernetes deployment, monitoring, and production troubleshooting.

Key Focus : Cloud Infrastructure, CI/CD Architecture, Kubernetes Operations, GitOps Deployment, GCP, Observability, Cost Optimization, Production Security, Team Mentoring

Inwintek Singapore

Field Engineer - Freelance | Mar 2019 - Dec 2023

- Delivered on-site enterprise server hardware support, including failed component replacement, functionality validation, and service restoration.
- Coordinated with clients on activity timelines, operational impact, replacement progress, and completion reporting.
- Prepared technical reports documenting actions performed, validation results, and follow-up recommendations.

Key Focus: Enterprise Server Support, Hardware Replacement, Service Restoration, Client Communication, Technical Reporting.

Indosoft IT Konsultan

DevOps Engineer & Backend Developer | Nov 2018 - Jan 2022

- Managed 20+ Ubuntu Linux servers across on-premises and cloud environments, ensuring system availability, operational stability, and performance reliability.
- Designed and maintained CI/CD pipelines using Jenkins and GitLab to standardize build, test, and deployment workflows for application delivery.
- Provisioned and operated cloud infrastructure on Alibaba Cloud and DigitalOcean to support scalable, secure, and highly available application environments.
- Developed RESTful APIs using Django Rest Framework, including integration with payment gateway services to support secure transaction processing.
- Configured VPN connectivity using MikroTik to enable secure network access between users, systems, and operational environments.
- Built automation scripts using Python and Bash to reduce repetitive manual tasks and improve operational efficiency.
- Created Docker Compose deployment manifests to standardize application runtime environments and simplify service deployment.
- Supported application infrastructure design, deployment troubleshooting, server maintenance, and production operation activities.

Key Focus: Linux Server Operations, CI/CD, Cloud Infrastructure, Backend API Development, Python/Bash Automation, Docker Compose, VPN, Production Support.

PT. Melody Indah Suara

System Administrator | Jan 2015 - Jul 2017

- Monitored system and application performance to identify operational issues, support service availability, and maintain infrastructure reliability.
- Automated routine operational and system administration tasks using Bash scripts to improve execution efficiency and reduce repetitive manual work.

- Administered internal network configuration, including IP addressing, MikroTik-based internet connectivity, and basic network troubleshooting.
- Installed, configured, and maintained Ubuntu servers and MySQL databases to support internal application and data management requirements.
- Performed operating system and network troubleshooting to ensure stable day-to-day IT operations.
- Managed endpoint security, antivirus configuration, backup, restore, and data recovery processes to support business continuity.
- Maintained user computers and internal IT equipment to ensure operational readiness and minimize user productivity disruption.

Key Focus: IT Operations, Linux Server Administration, Bash Automation, MikroTik Networking, MySQL Database, Backup & Recovery, Endpoint Support.

PT. Lintas Sei Ladi

System Administrator | Jan 2011 - Jan 2015

- Managed internal IT infrastructure operations, including network cabling, IP addressing, endpoint support, and MikroTik-based internet connectivity.
- Performed network and operating system troubleshooting to maintain stable day-to-day business operations.
- Managed endpoint security, antivirus installation, data backup, restore, and recovery processes to support information availability and business continuity.
- Maintained computer hardware, laptops, storage devices, and related IT assets, including providing recommendations for repair, replacement, and upgrades.
- Supported audio streaming infrastructure for radio channels to ensure stable broadcasting operations and service continuity.

Key Focus: System Administration, Network Operations, MikroTik, Endpoint Support, Backup & Recovery, Hardware Support, Audio Streaming Operations.

PT. Semen Padang - Aceh Area

Warehouse Lead | Aug 2017 - Jun 2018

- Coordinated warehouse-to-customer shipment activities to ensure timely, accurate, and well-documented delivery operations.
- Managed inventory scheduling, stock control, and monthly audit activities to maintain inventory accuracy and operational compliance.
- Prepared weekly operational reports for area management covering warehouse activities, shipment status, inventory updates, and operational performance.

Key Focus: Operations Coordination, Inventory Control, Stock Audit, Reporting, Team Coordination.

PROJECTS & IMPACT

Infrastructure Provisioning Automation Review — Reviewed Jenkins, Ansible, Python, Groovy, and Bash automation workflows for VMware-based provisioning to improve production readiness, reduce execution risk, strengthen validation logic, and ensure safe automation execution.

Security Hardening Automation — Collaborated with infrastructure and hardening teams to develop automation workflows for server hardening, vulnerability assessment, and security posture improvement.

Cloud Monitoring & Cost Optimization — Contributed to cost-efficiency initiatives by reducing redundant monitoring tool usage and integrating Grafana with Cloud Monitoring as a centralized observability datasource.

Kubernetes & CI/CD Modernization — Designed and maintained Jenkins and ArgoCD workflows to improve deployment consistency, support Kubernetes workloads, and strengthen release reliability.

Multi-Site Client Implementation Projects — Indosoft IT Konsultan

Successfully handled multiple network infrastructure and POS software implementation projects for hotel and entertainment business clients. Covered network setup, application installation, system configuration, troubleshooting, user coordination, and operational handover across multiple locations.

Application Containerization & Deployment Standardization — Indosoft IT Konsultan

Modernized application deployment by migrating from traditional server-based deployment to Docker-based containerized deployment. This initiative reduced recurring dependency conflicts, improved consistency between application environments, simplified release packaging, and strengthened rollback capability during production deployment issues.

Cloud-Native Migration from On-Premises to GKE — PT. Jaya Agung Teknologi

Led the migration of application workloads from on-premises infrastructure to Google Kubernetes Engine (GKE), enabling a more scalable, consistent, and cloud-native deployment model. The initiative improved operational flexibility, standardized workload management, and supported more reliable production delivery.

ACHIEVEMENTS & PROFESSIONAL ACTIVITIES

Finalist - International AI Hackathon, PPATK — Participated as a finalist in an international AI hackathon organized by PPATK, focusing on AI-based problem solving, analytical innovation, and technology-driven solutions.

Speaker - Artificial Intelligence Awareness Session, SMK Sasmita Jaya 1 — Served as a speaker during a university community service program, introducing AI concepts, technology trends, and practical use cases to vocational school students.

Postgraduate Academic Development — Actively involved in postgraduate academic and technology-related activities, with strong interests in cybersecurity, DevSecOps, artificial intelligence, secure automation, and data protection.

EDUCATION

Pamulang University - Master's Degree in Informatics Engineering | 2024 - Present — Currently pursuing a Master's degree with academic interests in cybersecurity, DevSecOps, artificial intelligence, secure automation, and data protection. Thesis direction focuses on information security and DevSecOps Automation Framework.

STMIK GICI Business School Batam | August 2011 – September 2016 | Bachelor's Degree in Information Systems — GPA: 3.26

CERTIFICATIONS & TRAINING

Red Hat Pro Academy DevOps by Kominfo - Containers, Kubernetes, OpenShift

Google Cloud Fundamentals, Core Infrastructure, Cloud Architecture, Kubernetes in Google Cloud / GKE, Terraform in Google Cloud

Alibaba Cloud Professional Training, AWS Academy - Cloud Developing, Solo.io - Fundamentals for Istio

Baba Studio - Data Science & Machine Learning with Python, HPE Nimble & Rubrik - Hardware Repair & FRU Part Replacement
